Nimax Network

The birth of Nimax Network marks a decisive step toward an increasingly global presence. With locations in Copenhagen and East Africa, the group expands its reach by combining technical expertise, innovation, and a shared vision focused on the future. This strategic move strengthens its commitment to supporting customers worldwide with increasingly advanced, tailored solutions and an international service network.

Quality is at the heart of our corporate identity.

It's the vision that guides us every day to ensure our customers achieve the highest level of efficiency in product coding, inspection, and labelling. Anticipating our customers' needs means deeply understanding their workflow, continuously updating our technical and regulatory know-how to offer accurate and timely information, and adopting the most advanced technologies to provide fast and effective support. These principles inspire us and make Nimax a reliable and cutting-edge partner.

by your side.

> CODING AND MARKING

At Nimax, we believe coding and marking systems should be straightforward and efficient.

That's why our solutions, from inkjet printers and manual markers to laser coding technologies, are designed for ease of use.

By simplifying daily operations, we help our customers stay focused on their core business.

> INSPECTION AND CONTROL

The Inspection and Control division develops and recommends effective, reliable solutions to detect and remove non-compliant products from the production line, in full compliance with current regulations and industry directives.

Our portfolio includes X-ray for foreign body inspection, metal detectors to detect metallic contamination, checkweighers to ensure net weight accuracy, and vision systems for verifying variable data applied or marked on products.

> LABELLING

The Labelling division brings together specialists with in-depth knowledge of both packaging technologies and marketing requirements.

Thanks to this combined expertise, Nimax consultants can identify and propose the most suitable systems to meet your graphic and production objectives.

Our modular range, from print & apply systems to TTO coders and label applicators, offers flexible solutions tailored to any budget.

> DIGITAL INNOVATION

Whether it's generating print codes, managing label templates, or monitoring your production line, the Digital Innovation division offers smart tools to keep your systems and departments perfectly connected. No complex procedures: just streamlined processes to boost productivity and reduce costs.

SERVICES

our method

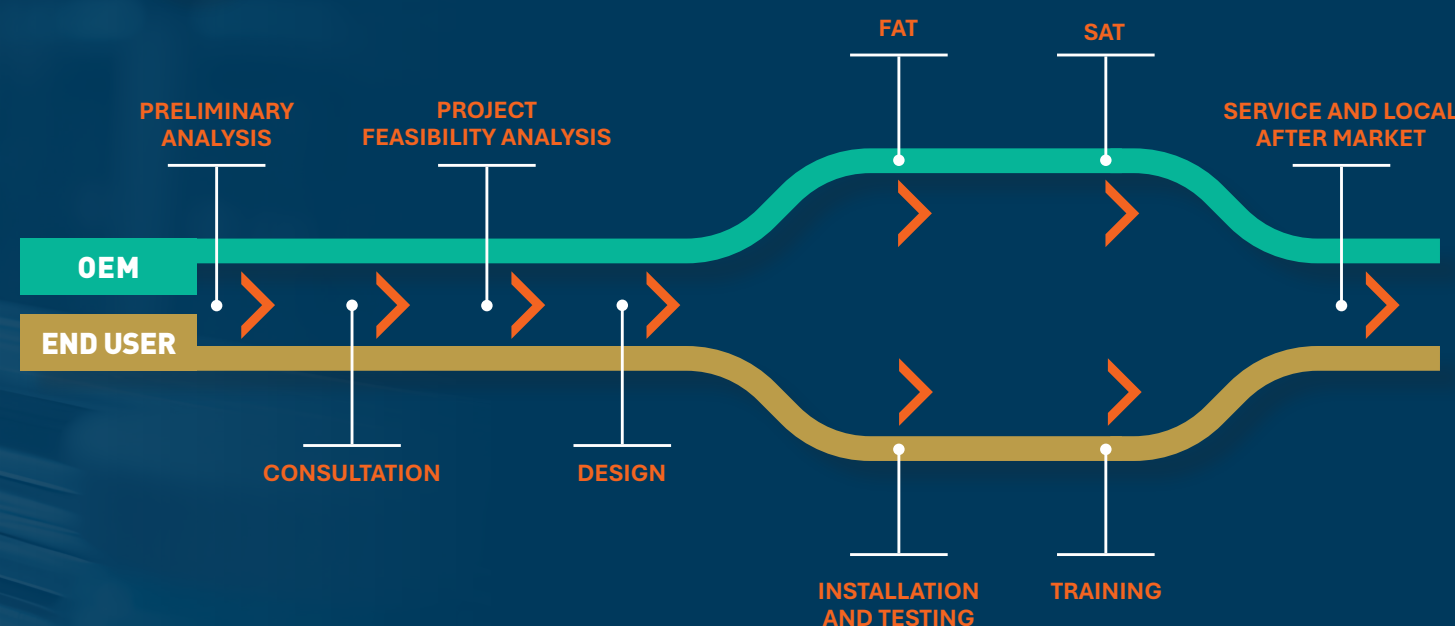

At Nimax, every project begins with listening to and understanding our customers' real needs: this is how we create tailored paths to efficiency, anticipating coding, inspection, and labelling requirements.

From preliminary analysis to feasibility studies, every phase is driven by our commitment to innovation and excellence.

We support OEMs comprehensively during **FAT** and **SAT** stages, ensuring fast and effective local after-sales service.

For end users, we enhance technologies through **installation, testing, and training**, with the added value of constant support.

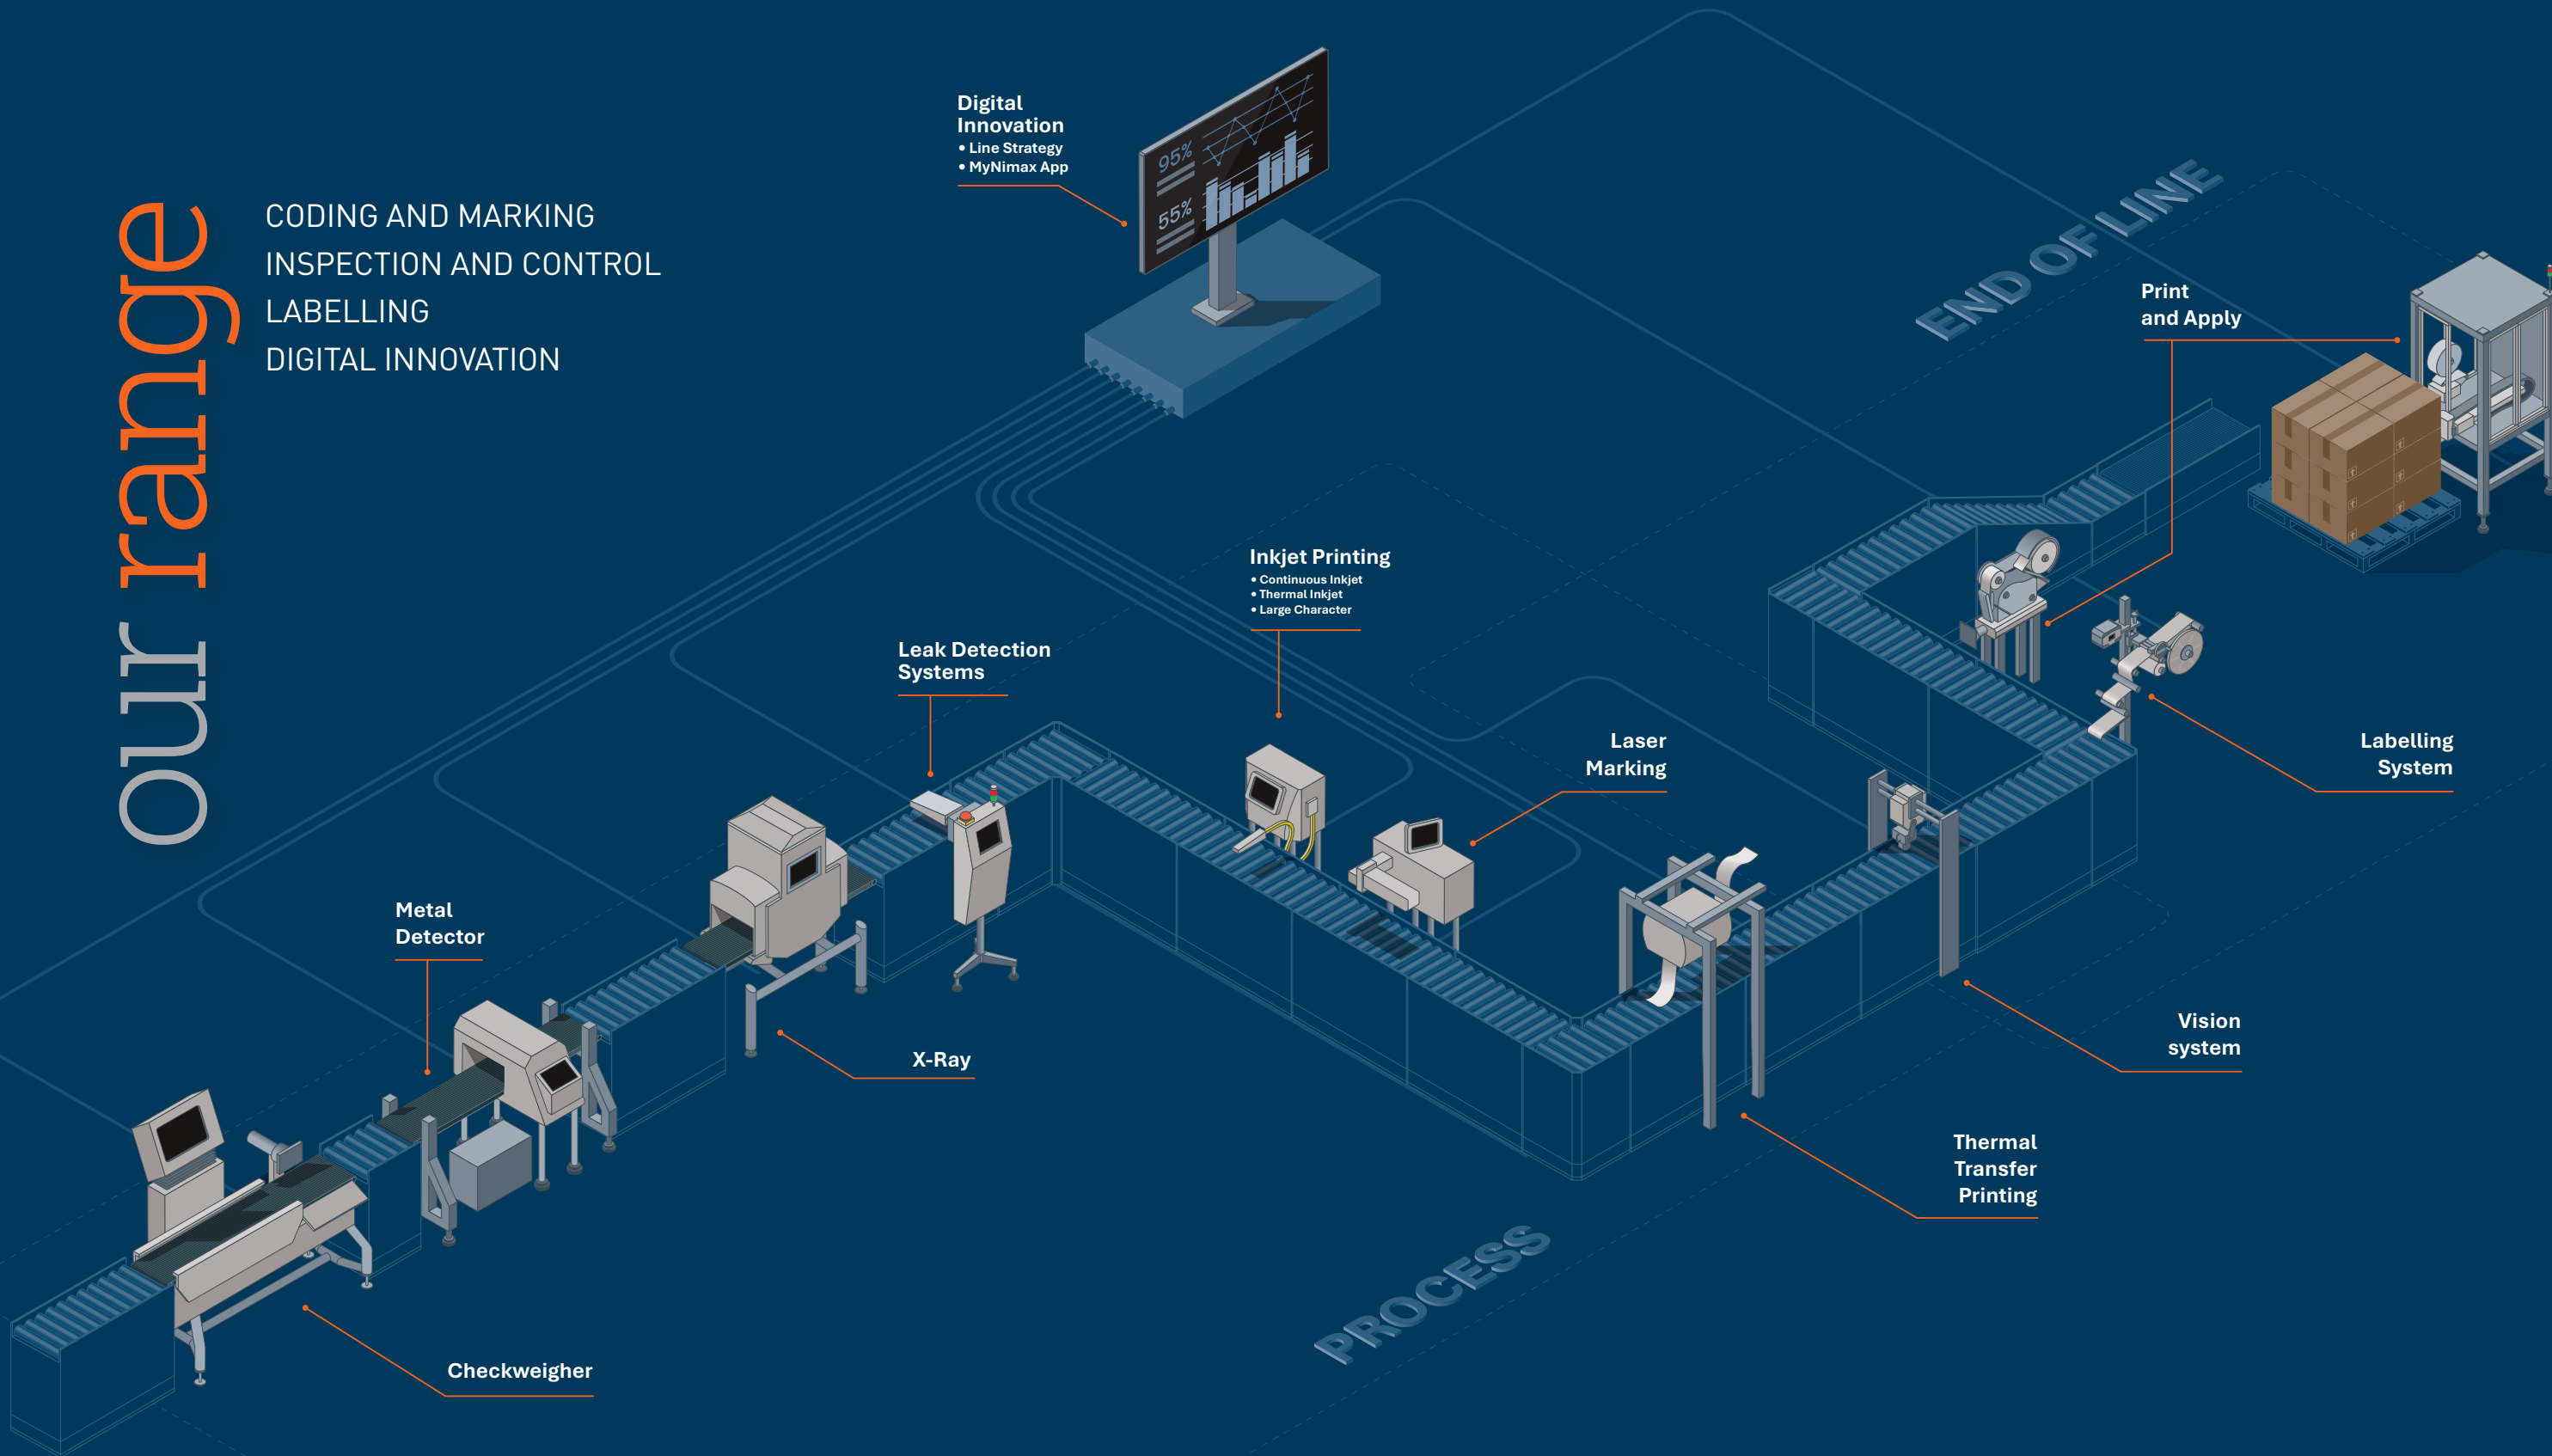

An efficient, effective and proven workflow.
